

Agenda : Module Overview

① Grithule Student Dev Pack → Free
→ IntelliJ
Copilot → APT writing code for you

② WhatsApp Group.

③ What is Backend.

④ Expectation from learners. → Dos
→ Don'ts

⑤ Curriculum of the Module

99%

→ This module is independent of any previous module that has happened at school

→ If you are an experienced eng, this module will not be adding a lot of value in initial few classes.

> LLD/HLD will be more imp for you.
if backlog skip these classes and complete backlog.

Who should focus on this module

- ① who have 0 or < 6 months of LWF experience.
 - ② who want to change their tech stack. \Rightarrow
 - Java Spring Boot
- C# / C++

else: focus on your backlog first
(LLD/HLD)

I. Github Student Developer Pack

Free access to Github Student Dev Pack

- ① Github Copilot (AI for coding)
- ② All JetBrains IDEs (Clion, IntelliJ, PyCharm)

Check Profile Name (with x) {

?}

③ 3 domain name

④ \$200 for each of

Ⓐ Azure

Ⓑ DigitalOcean

Carbethe.me

What is Backend

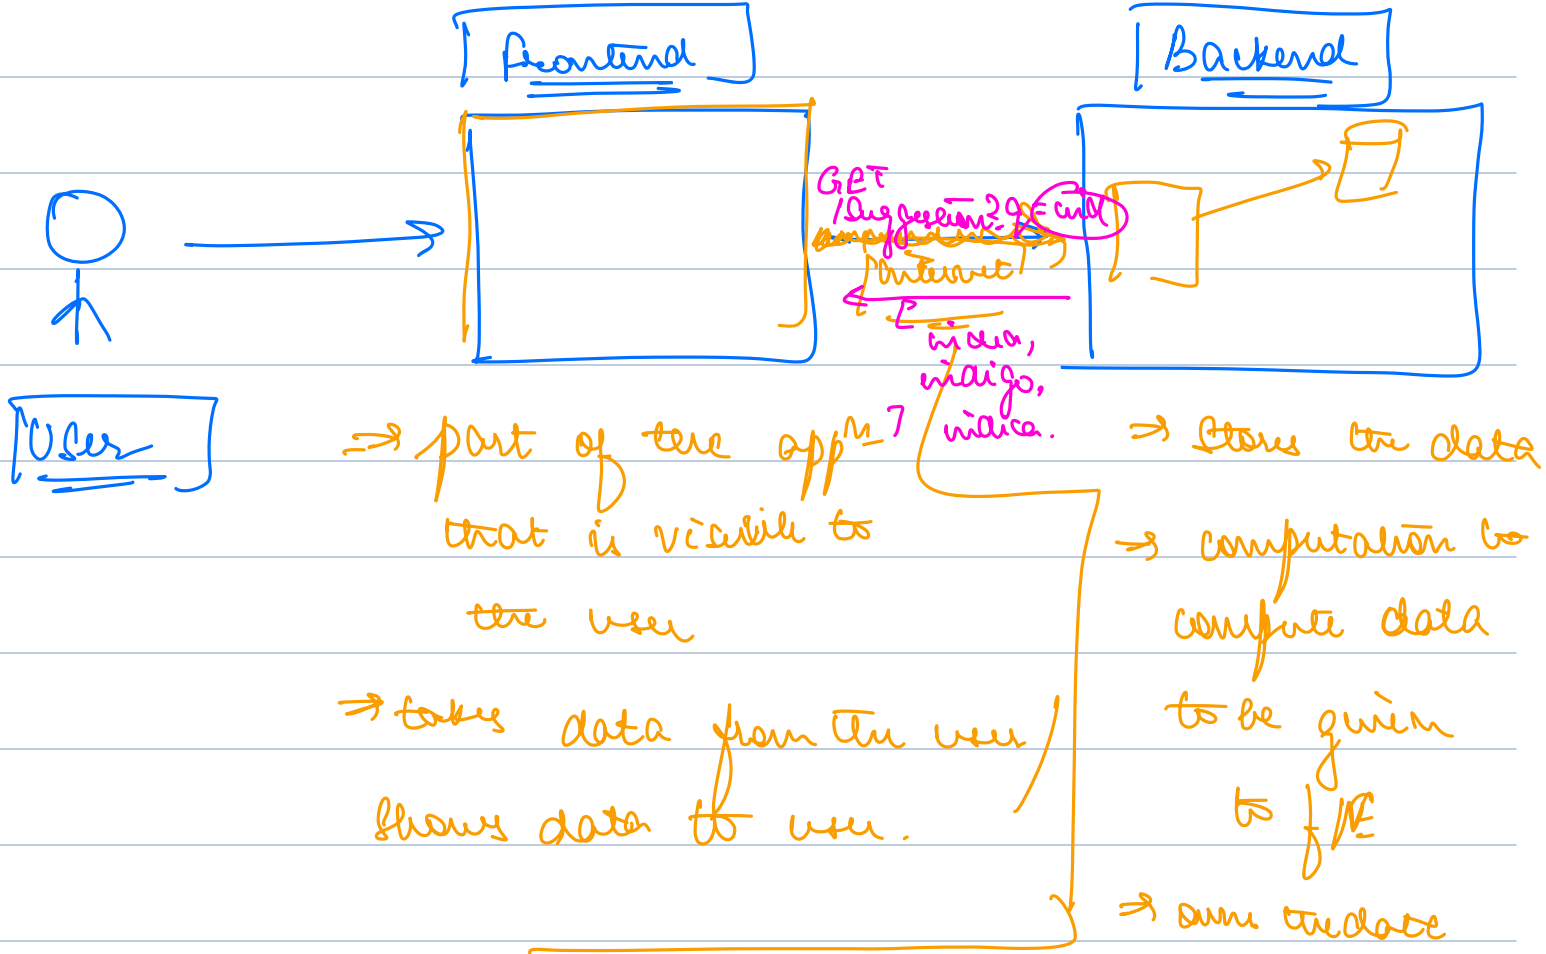

a lot of complexity
goes BTS to get a
video streamed
to 100s of people.

(Someone must have stored
the messages that you can
see now)

⇒ computers that are running BTS to create / flow data that a user may be interested in

↓
Complex and nuanced.

- types of DB
- types of infra layers
 - cache
 - message queue

Expectation wrt Backend Module

Why
①

Get a technically complex and comprehensive

project in your resume.

Min in a good proj
a) Database

b) APIs

c) Unit Testing

d) Deployment

e) Metrics/ Monitoring

② Teach best practices around common f^{nc} that SWE might work on

→ Auth

→ Payment G/W

→ Testing

→ API Design

→ increase chance
of you to
clear interviews

⇒ DO

① Understand how real SW work like

→ IDEs
→ "figure out" =

② Teach you how to learn and how to figure out.

③ Common tools, nuances, best practices
↳ to become better eng.

⇒ ④ get you to work on adv infra layers
Kafka, ES, Redis, AWS

DON'T

→ ① Spoonfeed
→ ② Memoization

Curriculum

24-28
Classes

① Foundation

→ Git

② Foundation Project

→ Intro to Spring and Boot

→ APIs

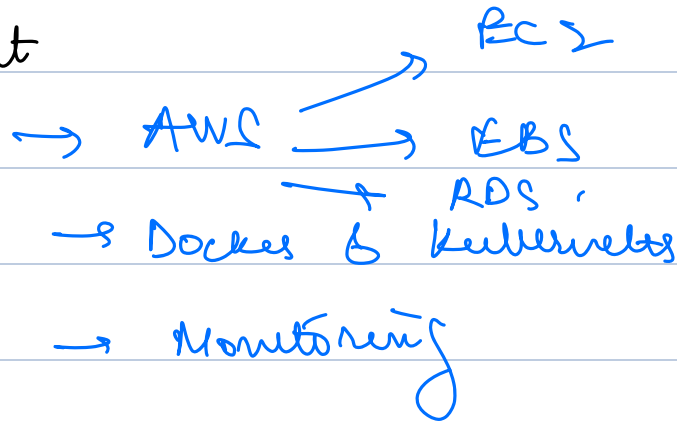

→ DBS and ORMs

→ Authentication

→ Unit Testing

→ Pagination & Sorting.

③ Deployment

④ Adv Concepts

→ Kafka

→ Redis

→ API G/W

→ Elastic Search

⇒ 5 Services (App Spring projects)

Prog language

Spring Boot

Using Java

⇒ 80%

95%

Java

Spring Boot
